

39. Get First 3 Rows Question

Write a Pandas program to get the first 3 rows of a given DataFrame. **Aim**

To retrieve and display the first three rows of a DataFrame using Pandas.

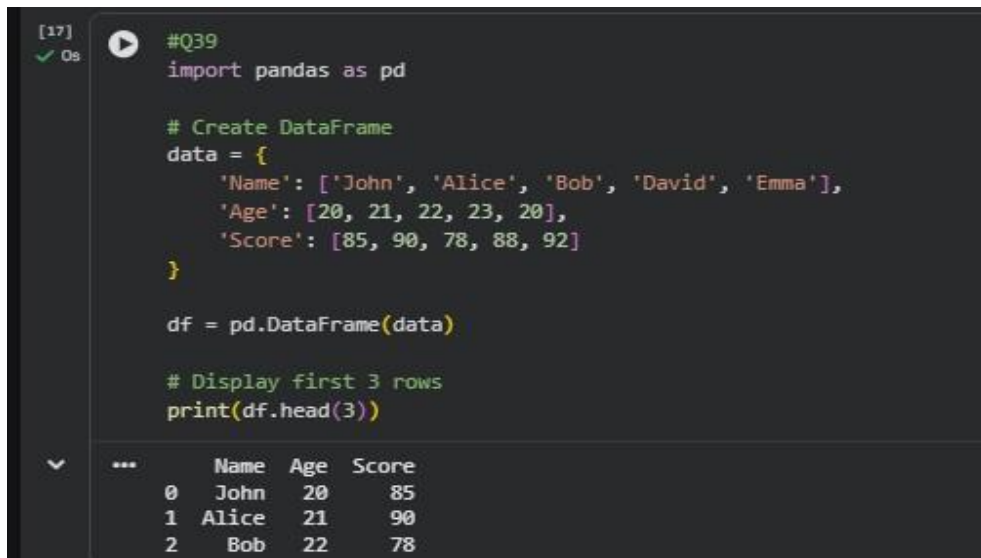

Code import pandas as pd

Create DataFrame

```
data = {  
    'Name': ['John', 'Alice', 'Bob', 'David', 'Emma'],  
    'Age': [20, 21, 22, 23, 20],  
    'Score': [85, 90, 78, 88, 92]  
}
```

df = pd.DataFrame(data)

print(df.head(3)) **Output:**

The screenshot shows a Jupyter Notebook cell with the following code:

```
[17] #Q39  
import pandas as pd  
  
# Create DataFrame  
data = {  
    'Name': ['John', 'Alice', 'Bob', 'David', 'Emma'],  
    'Age': [20, 21, 22, 23, 20],  
    'Score': [85, 90, 78, 88, 92]  
}  
  
df = pd.DataFrame(data)  
  
# Display first 3 rows  
print(df.head(3))
```

The output of the code is a DataFrame with 3 rows and 3 columns:

	Name	Age	Score
0	John	20	85
1	Alice	21	90
2	Bob	22	78

40. Select Name and Score Columns Question

Write a Pandas program to select the 'name' and 'score' columns from the given DataFrame.

Aim

To select and display specific columns, namely name and score, from a DataFrame using Pandas.

Code import pandas as pd

```
data = {  
    'name': ['John', 'Alice', 'Bob', 'David', 'Emma'],  
    'age': [20, 21, 22, 23, 20],  
    'score': [85, 90, 78, 88, 92]  
}
```

```
df = pd.DataFrame(data)
```

```
# Select name and score columns
```

```
result = df[['name', 'score']]
```

```
print(result) Output:
```

```
[18] ✓ Os #Q40
import pandas as pd

# Create DataFrame
data = {
    'name': ['John', 'Alice', 'Bob', 'David', 'Emma'],
    'age': [20, 21, 22, 23, 20],
    'score': [85, 90, 78, 88, 92]
}

df = pd.DataFrame(data)

# Select name and score columns
result = df[['name', 'score']]

# Display result
print(result)
```

	name	score
0	John	85
1	Alice	90
2	Bob	78
3	David	88
4	Emma	92
